## Consortia

ASME works with consortia of distinct types and sizes and welcomes discussion with all consortium managers.

A consortium should consist of at least five member institutions, with a single point of contact for negotiations with ASME. The consortium should sign one license agreement and pay through one invoice.

Each institution within the consortium will need to appoint an account administrator who is responsible for setting up the institution's account and who will receive any service communications.

The consortium account administrator should communicate any changes within the consortium to the relevant ASME regional contact as soon as possible.

COUNTER compliant usage statistics are provided for each institution. ASME now offers a consortia report based on COUNTER 5-compliant data.
